

Siddesh Kamble

(315) 450-9024 | sskamble@syr.edu | [linkedin/siddeshkamble](https://www.linkedin.com/in/siddeshkamble) | [github/SiddeshKamble](https://github.com/SiddeshKamble)

TECHNICAL SKILLS

Programming Languages: Python, Java, Go, R, JavaScript, TypeScript

Web/Backend: React.js, Next.js, Node.js/Express, Django, RESTful APIs, Microservices

Data Systems: SQL Server, PostgreSQL, MySQL, MongoDB, SQLite, ETL pipelines, data modeling

Cloud & Tools: AWS (EC2, RDS), GCP, Azure, Docker, Kubernetes, Postman, Prisma, MLflow, Power BI, Looker Studio

Certifications/Awards: AWS Certified Developer – Associate, OCI 2025 Certified GenAI Professional, Google CCAI

EXPERIENCE

iConsult Collaborative – Software Developer — Syracuse, New York

January 2025 – Present

- Led development of a Next.js + MySQL platform used by 20–30 caseworkers, reducing applicant processing time by 60%.
- Designed and owned a normalized relational database (10–12 core tables, 30GB+), optimizing queries to support 5,000+ monthly interactions and longitudinal financial analysis.
- Built cloud-native data ingestion and validation services on GCP (Cloud Functions, Cloud SQL), processing hundreds of MBs to GBs weekly and eliminating 10+ hours/week of manual work.
- Implemented data-driven dashboards exposing real-time financial and social-impact metrics (income, SNAP/TANF, tax credits), accelerating quarterly program reviews.
- Owned backend architecture design, including API contracts, database schemas, and GCP-based service architecture, making informed tradeoffs across scalability, cost, and long-term maintainability.

Quantiphi Inc – Conversational AI Engineer — Mumbai, India

June 2021 – October 2023

- Developed production-grade Dialogflow ES/CX chatbots and IVR systems for 50,000+ users, achieving 99–99.5% uptime and reducing manual support overhead.
- Designed conversational backends, routing logic, and fallback strategies that reduced human-agent handoffs and improved task completion rates for high-volume intents.
- Built an AI-driven psychology training assistant by integrating Dialogflow CX with a Soul machines Digital Human, enabling 300+ students to run scenario-based simulations and increase completion rates to 80–85%.
- Mentored junior developers, led code reviews, and created internal tools and coding standards adopted by 50+ engineers, improving service reliability and accelerating onboarding.
- Partnered with product and design stakeholders to deliver multi-channel conversational platforms, improving observability and reducing time-to-detection for production issues.

Markytics.AI – Data Science Intern — Pune, India

January 2021 – June 2021

- Built Python microservices and batch jobs for financial risk scoring across 10,000+ loan accounts, integrating upstream data and reducing manual credit review effort by 25–30
 - Translated business requirements into data-driven features for a financial collections platform, including conversation sentiment tagging, DPD-based write-off logic, vendor payouts, notifications, and analytics dashboards.
 - Built role-based forecasting and reporting layers (APIs + dashboards) for regional, zonal, and territory managers, improving visibility of forecast vs. actual data and enabling better territory planning.
 - Developed Django-based backend modules to expose ML models as stable REST APIs, enabling non-technical teams to consume predictions within internal tools.
 - Ran A/B tests and predictive analyses, increasing campaign conversion rates by 18% through validated experimentation.
-

PROJECTS

Contextual Sarcasm Detection Using NLP — Python, PyTorch, Transformers (RoBERTa, DistilBERT)

- Built an NLP pipeline on 1M+ Reddit comments using LSTM and transformer models (RoBERTa, DistilBERT) and exposed via REST APIs for real-time inference.
- Achieved 85% F1-score, capturing contextual cues, semantic inversion, and community-specific language patterns.

Secure File Locker with Fine-Grained Access Control — Python, Cryptography (AES-GCM, X25519), REST APIs

- Developed a client-side encrypted file system with AES-GCM and X25519, enabling per-user secure sharing, instant access revocation, and tamper-evident audit logs.
- Built backend APIs to manage users, keys, and a hash-chained audit log for tracking of uploads, downloads, and file sharing.

Real-Time Suspicious Activity Detection — Python, CNNs, Transfer Learning, Computer Vision

- Built a real-time CCTV system to detect shoplifting, robbery, and break-ins using CNNs and transfer learning, with end-to-end backend pipelines for ingestion, preprocessing, inference, and automated alerts.
 - Curated 94GB surveillance dataset, optimized GPU training, and reduced compute time by 40%; published in IEEE ICCCNT.
-

EDUCATION

Syracuse University – Master of Science in Computer Science

December 2025

Coursework: Design and Analysis of Algorithms, Applied NLP, Introduction to AI, Database Management Systems

Sardar Patel Institute of Technology – B.Tech in Computer Engineering

May 2021

Coursework: Advanced Data Structures, Artificial Intelligence & Soft Computing, OOP, Big Data Analytics
